

Response to any Infection**7) engage with the NHS Test and Trace process**

For September, parents/carers must understand that they will need to be ready and willing to:

- [book a test](#) if they or their child are displaying symptoms. Pupils must not come into the school if they have symptoms, and must be sent home to self-isolate if they develop them in school. All children can be tested, including children under 5, but children aged 11 and under will need to be helped by their parents/carers if using a home testing kit
- provide details of anyone they have been in close contact with if they were to test positive for coronavirus (COVID-19) or if asked by NHS Test and Trace
- [self-isolate](#) if they have been in close contact with someone who develops coronavirus (COVID-19) symptoms or someone who tests positive for coronavirus (COVID-19)

Parents/carers should inform the school of the results of a test immediately:

- if someone tests negative, if they feel well and no longer have symptoms similar to coronavirus (COVID-19), they can stop self-isolating. They could still have another virus, such as a cold or flu – in which case it is still best to avoid contact with other people until they are better. Other members of their household can stop self-isolating.
- if someone tests positive, they should follow the [‘stay at home: guidance for households with possible or confirmed coronavirus \(COVID-19\) infection’](#) and must continue to self-isolate for at least 7 days from the onset of their symptoms and then return to school only if they do not have symptoms other than cough or loss of sense of smell/taste. This is because a cough or anosmia can last for several weeks once the infection has gone. The 7-day period starts from the day when they first became ill. If they still have a high temperature, they should keep self-isolating until their temperature returns to normal. Other members of their household should continue self-isolating for the full 14 days.

Anyone who displays symptoms of coronavirus (COVID-19) can and should get a test. Tests can be booked online through the NHS [testing and tracing for coronavirus website](#), or ordered by telephone via NHS 119 for those without access to the internet. Essential workers, which includes anyone involved in education or childcare, have priority access to testing.

We will inform parents/carers with further information regarding this in September.

8) manage confirmed cases of coronavirus (COVID-19) amongst the school community

When we become aware that someone who has attended school has tested positive for coronavirus (COVID-19) we will contact the local health protection team. They will work with us and guide the

school through the actions we need to take.

Based on the advice from the health protection team, we must send home those people who have been in close contact with the person who has tested positive, advising them to self-isolate for 14 days since they were last in close contact with that person when they were infectious. Close contact means:

- direct close contacts - face to face contact with an infected individual for any length of time, within 1 metre, including being coughed on, a face to face conversation, or unprotected physical contact (skin-to-skin)
- proximity contacts - extended close contact (within 1 to 2 metres for more than 15 minutes) with an infected individual
- travelling in a small vehicle, like a car, with an infected person

The health protection team will provide definitive advice on who must be sent home.

Household members of those contacts who are sent home do not need to self-isolate themselves unless the child, young person or staff member who is self-isolating subsequently develops symptoms. If someone in a class or group that has been asked to self-isolate develops symptoms themselves within their 14-day isolation period they should follow [‘stay at home: guidance for households with possible or confirmed coronavirus \(COVID-19\) infection’](#). They should get a test, and:

- if the test delivers a negative result, they must remain in isolation for the remainder of the 14-day isolation period. This is because they could still develop the coronavirus (COVID-19) within the remaining days.
- if the test result is positive, they should inform their setting immediately, and must isolate for at least 7 days from the onset of their symptoms (which could mean the self-isolation ends before or after the original 14-day isolation period). Their household should self-isolate for at least 14 days from when the symptomatic person first had symptoms, following [‘stay at home: guidance for households with possible or confirmed coronavirus \(COVID-19\) infection’](#)

Further guidance is available on [testing and tracing for coronavirus \(COVID-19\)](#).

9) contain any outbreak by following local health protection team advice

If we have two or more confirmed cases within 14 days, or an overall rise in sickness absence where coronavirus (COVID-19) is suspected, we may have an outbreak, and must continue to work with our local health protection team who will be able to advise if additional action is required.

In some cases, health protection teams may recommend that a larger number of other pupils self-isolate at home as a precautionary measure – perhaps the whole site or year group.
